

5 Ways to Achieve a Resilient Supply Chain

for A&D Companies

1 Flexibility

Identify tradeoffs between system requirements and design based on supplier capabilities to ensure the product is capable of being built

2 Agility

Identify any gaps and assess market risks to be prepared for potential disruptions in the supply chain

3 Diversity

Create a multithreaded approach by expanding sourcing to multiple suppliers to prevent a single point of failure

4 visibility

Gain full transparency of product and supplier data in the Defense Industrial Base to optimize cost and enhance performance

5 Awareness

Recognize foreign dependencies and find alternative suppliers from adjacent markets with the same capabilities
